Education

University of California, Berkeley, Berkeley, CA,

Expected May 2025

Doctor of Philosophy (PhD) in Computer Science, GPA: 4.0/4.0.

Carnegie Mellon University - School of Computer Science, Pittsburgh, PA,

Dec 2019

Master of Science in Machine Learning, QPA: 4.11/4.33.

Birla Institute of Technology and Science (BITS), Pilani, Hyderabad, India,

Jul 2018

Bachelor of Engineering (Honours) Computer Science, CGPA: 9.93/10.

Research Experience

Graduate Student Researcher, UC Berkeley, Berkeley, CA.

Jan 2021–Present

- I am advised by Prof. Nilah M. Ioannidis and the focus of my PhD is on understanding and engineering gene expression using machine learning (ML) methods.
- Co-led a multi-lab initiative to create a scalable, data-efficient pipeline for designing cell-type-specific promoter sequences crucial to the success of gene therapies, using model-based optimization (MBO). We experimentally validated our pipeline in the difficult setting of designing cell-type-specific promoters for three highly similar blood cancer cell lines (K562, Jurkat, and THP1). Starting from an initial set of sequences for which we had collected expression data, we were able to improve the specificity of most sequences and in K562 cells, we found a sequence that had 75.85% higher specificity than the best starting sequence. **This work was described in two manuscripts, including one accepted at NeurIPS 2024.**
- Developed fine-tuning strategies to improve genomic sequence-to-expression models' performance on individual genomes. Fine-tuning the popular Enformer model on paired personal genome and transcriptome data leads to enhanced cross-individual prediction accuracy that matches or slightly outperforms variant-based baselines on genes seen during training. We also identified a key limitation – that fine-tuning does not improve generalizability on unseen genes.
- During my PhD, I have also worked on designing biological sequences (e.g. stable mRNA, and regulatory DNA sequences) using diffusion models, identifying the biological factors that control alternative splicing using predictive modelling, and curriculum learning for improving sequence-to-expression models.

Research Assistant, Carnegie Mellon University, Pittsburgh, PA.

Aug 2018–Dec 2019

- Worked with Prof. Leila Wehbe on understanding the representation of language syntax in the human brain using functional magnetic resonance imaging (fMRI) and ML.
- Effort-based metrics widely used to study syntax processing do not explicitly encode syntactic structure. We proposed subgraph embedding-based features that encode syntactic structure and showed that they are predictive of brain activity, even after controlling for effort. Our results indicated that syntax processing is distributed across the language network and that there is some evidence of hierarchical structure building and prediction of future syntactic information in the brain. Using BERT embeddings, we also showed that the regions that process syntax are a subset of those that process semantics. **This work was published at NeurIPS 2021.**

Research Intern, Cognition Lab, Indian Institute of Science (IISc), Bangalore, India.

Jan 2018–May 2018

- Used fMRI and ML to identify brain regions involved in covert attention modulation under the guidance of Prof. Sridharan Devarajan.
- This was accomplished by analyzing which regions' activations were most predictive of times at which a participant was required to pay covert attention. Many deep learning-based seq2seq models were tested in this context. Our analysis showed that certain regions of the frontal lobe, the basal ganglia and the posterior parietal cortex all act in unison to modulate covert attention and that the effects of attention modulation can be seen in visual cortical areas.

Intern, Smart Data Analytics Research, Universität Bonn, Bonn, Germany.

May 2017–Aug 2018

- Worked on several projects in the broad area of automated fact verification under the tutelage of Prof. Dr. Jens Lehmann.
- Developed a fact verification system called DeFactoNLP which could not only assess the veracity of a claim but also retrieve supporting evidences from Wikipedia. The system made use of named entity recognition (NER), TF-IDF vector comparisons and a Decomposable Attention-based natural language inference model.
- Built a system which could ascertain the credibility of a website using handcrafted features derived from the text and visuals present on the website. Also, co-developed and benchmarked DeFacto, a triple verification framework.

Industrial Experience

Machine Learning Intern, Dyno Therapeutics, Remote.

May 2024–Aug 2024

- Worked on sequence-to-function models and distribution shift detection for protein engineering.

Machine Learning Intern, Patch Biosciences, New York, NY.

May 2023–Aug 2023

- Explored active learning strategies to enhance an ML pipeline for designing 3' UTR sequences that boost mRNA stability.

Software Engineer, Microsoft, Bellevue, WA.

Jan 2020–Jan 2021

- Worked on improving the quality of related searches shown on the Bing image search vertical. This was done by both improving ranking algorithms and the quality of candidate suggestions, mostly through the deployment of state-of-the-art ML models at scale. These changes significantly boosted user engagement and revenue.

Software Engineer Intern, Microsoft, Sunnyvale, CA.

May 2019–Aug 2019

- Devised a new demand-based autoscaler for Application Gateways as a member of the Azure Networking group. This led to a ~66% reduction in the number of dropped requests compared to the previous system.

Honors

Graduate Research Grant, Hearts to Humanity Eternal (H2H8) Association.

Aug 2022

Gold Medal, for best academic record (highest CGPA), BITS Pilani, Hyderabad.

Aug 2018

Best All-Rounder Award, in recognition of multidimensional achievements, BITS Pilani, Hyderabad.

Aug 2018

Merit Scholarship, BITS Pilani, Hyderabad.

2014–18

Working Internships in Science and Engineering Scholar, German Academic Exchange Service.

2017

Teaching Experience

Graduate Student Instructor (GSI), UC Berkeley, Berkeley, CA.

Aug 2024–Present

- Head GSI for CS194/294-172, a special topics course on computational genomics, taught by Prof. Nilah M. Ioannidis. My responsibilities include preparing and grading homeworks, and providing guidance on class projects and presentations.

Graduate Student Instructor (GSI), UC Berkeley, Berkeley, CA.

Aug 2022–Dec 2022

- One of the two head GSIs for CS176, a course on algorithms used in computational biology, taught by Prof. Nilah M. Ioannidis and Prof. Yun Song. My responsibilities included teaching a weekly discussion section with ~ 20 students, preparing homeworks, and grading examinations.

Teaching Assistant, BITS Pilani, Hyderabad, India.

Aug–Dec 2017, Jan–May 2017, Aug–Dec 2016

- Teaching assistant for courses on ML, discrete structures for computer science, and development studies. I was responsible for preparing and grading assignments.

Professional Service

- Reviewer for NeurIPS 2024 (top reviewer), and ICLR 2025.

Skills

Languages: Python, C/C++/C#, Java

Libraries: PyTorch, Tensorflow, JAX, NumPy, SciPy
